

SI D1350 double row antistatic bar 1350 mm alu

SI D650 is a double row antistatic bar that is used to even more intensive dissipation of static electricity from surfaces. Typical applications are the unloading of sheets of paper and bows in printing, packaging production and plastic production. Wherever materials due to high electrostatic charge cannot be processed or moved. The swepro antistatic bars are built according to customer needs. The double row antistatic bar has a compact design with a cross section of 30x30mm. All bars have at each end holes for M6 screws for easy mounting. The following standard lengths are available: 250mm / 450mm / 650mm. Other lengths up to 2950mm can be realized.

Technical data

Item number	941124
Weight	1,86 kg
Dimensions LxWxH	1350x30x30 mm
Material	Aluminium
